

ILA7056SH

3 W Mono BTL Audio Output Amplifier

GENERAL DESCRIPTION

The ILA7056SH is a mono output amplifier contained in a 9 pin SIL medium power package (SOT110). The device is designed for battery-fed portable mono recorders, radios and television.

FEATURES

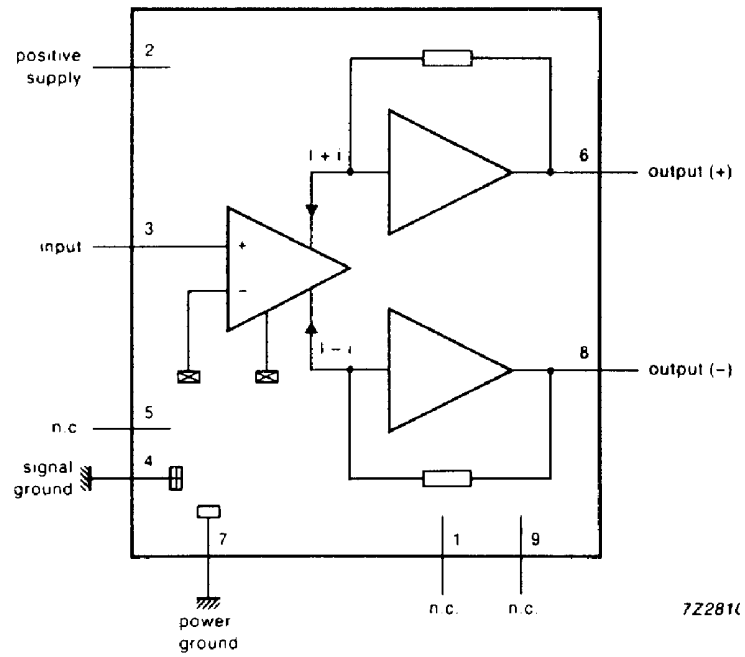

- No external components
- No switch-on/off clicks
- Good overall stability
- Low power consumption
- Short circuit proof
- ESD protected on all pins.

QUICK REFERENCE DATA

SYMBOL	PARAMETER	CONDITIONS	MIN.	TYP.	MAX.	UNIT
V _p	supply voltage		3	11	18	V
P _o	output power	V _p =11 V, THD=10%, R _L =16 Ω	2.5	3		W
G _v	internal voltage gain		39	40,0	42	dB
I _p	total quiescent current	V _p =11 V; R _L =●		5	7	mA
THD	total harmonic distortion	P _o =0,5 W		0,25	1	%

FUNCTIONAL DESCRIPTION

The ILA7056SH is a mono output amplifier, designed for battery-fed portable radios and mains-fed equipment such as television. For space reasons there is a trend to decrease the number of external components. For portable applications there is also a trend to decrease the number of battery cells, but still a reasonable output power is required.

The ILA7056SH fulfills both of these requirements. It needs no peripheral components, because it makes use of the Bridge-Tied-Load (BTL) principle. Consequently it has, at the same supply voltage, a higher output power compared to a conventional Single Ended output stage. It delivers an output power of 1 W into a loudspeaker load of 8 W with 6 V supply or 3 W into 16 W loudspeaker at 11 V without need of an external heatsink. The gain is internally fixed at 40 dB. Special attention is given to switch-on/off click suppression, and it has a good overall stability. The load can be short circuited at all input conditions.

SYMBOL	PARAMETER	CONDITIONS	MIN.	MAX.	UNIT
Vp	supply voltage		-	18	V
iorm	Peak output current repetitive		-	1	A
iosm	Peak output current non-repetitive		-	1.5	A
Tstg	storage temperature range		-55	150	°C
Tj	junction temperature		-	150	°C
Plot	total power dissipation	$T_{case} < 60\text{ °C}$	-	9	W
Tsc	short circuiting time	see note 1	-	1	hr

Note

1. The load can be short-circuited at all input conditions.

SYMBOL	PARAMETER	NOM.	UNIT
hibk	from junction to case	10	K/W
Rth.a	from junction to ambient in free air	55	K/W

POWER DISSIPATION

Assume: $V_p = 11\text{ V}$; $R_L = 16\text{ W}$.

The maximum sine-wave dissipation is 1.52 W.

The $R_{th\ j-a}$ of the package is 55 K/W.

$T_{amb\ max} = 150 - 55 \cdot 1.52 = 66.4\text{ °C}$.

CHARACTERISTICS

SYMBOL	PARAMETER	CONDITIONS	MIN.	TYP.	MAX.	UNIT
V _p	operating supply voltage		3	11	18	V
I _{QRM}	repetitive peak output current		-	-	0.6	A
I _P	total quiescent current		-	5	7	mA
P _O	output power	THD= 10%	2.5	3	-	W
THD	total harmonic distortion	P _o = 0.5 W	-	0.25	1	
GV	voltage gain		39	40.5	42	dB
V _{no}	noise output voltage	note 2	-	180	300	μV
V _{no}	noise output voltage	note 3	-	60	-	[JV
	frequency response		-	20 to 20.000	-	Hz
RR	ripple rejection	note 4	36	50	-	dB
AV	DC-output offset voltage	note 5	-	-	200	mV
I _{ZJ}	input impedance		-	100	-	kii
I _{lb}	input bias current		-	100	300	nA

Notes to the characteristics

1. With a load connected to the outputs the quiescent current will increase, the maximum value of this increase being equal to the DC output offset voltage divided by R_L.
2. The noise output voltage (RMS value) is measured with R_S = 5 kW unweighted (20 Hz to 20 kHz).
3. The noise output voltage (RMS value) at f = 500 kHz is measured with R_S = 0 W and bandwidth = 5 kHz. With a practical load (R_L = 16 W, L_L = 200 mH) the noise output current is only 50 nA.
4. The ripple rejection is measured with R_S = 0 W and f = 100 Hz to 10 kHz. The ripple voltage (200 mV) is applied to the positive supply rail.
5. R_S = 5 kW.
